SUMMARY

Product-minded software engineer with strong native Apple development experience and a track record of owning complex client-side features across iOS, visionOS, and macOS. Comfortable working across product, design, AR/3D pipelines, media playback, internal tooling, scripting, and backend-adjacent workflows. Builds practical software end-to-end, from polished mobile interfaces to automation scripts, web utilities, prototypes, games, and mixed reality experiences. Uses modern AI coding tools such as Claude Code, Codex, and Copilot to accelerate exploration, refactoring, and scaffolding while maintaining careful review, testing, and production-quality judgment.

TECHNICAL SKILLS

Swift, SwiftUI, UIKit, Objective-C, Python, Bash, JavaScript, TypeScript, HTML/CSS, C, C++, C#, Lua, iOS, visionOS, macOS, Xcode, Git, REST APIs, iCloud, Firebase, Firestore, Google Cloud Storage, Unity, Godot, Vuforia, ARKit, RealityKit, media playback, design systems, internal tools, scripting, AI-assisted development

EXPERIENCE

Flickplay — Founding Product Engineer

July 2021 – November 2025

Los Angeles, CA / Seattle, WA

- Owned development of native iOS, visionOS, and macOS clients for a complex AR/media product involving playback, mixed reality content creation, location-based flows, creator tools, and 3D content workflows.
- Built and maintained core client features across app architecture, UI implementation, media handling, platform-specific behavior, and product polish.
- Developed a custom design system and reusable component patterns that improved interface consistency and helped the team move faster across new features.
- Worked closely with product and design to define features, refine interaction details, resolve ambiguity, and turn early product ideas into shippable native implementations.
- Supported backend, QA, and 3D pipeline workflows by building Python and Bash scripts, macOS utilities, and lightweight web tools tailored to team needs.
- Operated across engineering, product, design, and content-pipeline boundaries in a startup environment where ownership often extended beyond a single codebase.
- Used AI coding tools selectively for codebase exploration, implementation scaffolding, and refactoring support while reviewing outputs carefully and keeping production code maintainable.

Self-Employed — Independent Software Developer

Remote

- Built multiple independent iOS applications using Swift, SwiftUI, UIKit, public APIs, native platform features, and iCloud sync.
- Created websites, prototypes, automation scripts, and lightweight tools using HTML, CSS, JavaScript, Python, Bash, and related frameworks.
- Developed personal games and interactive experiments in Godot and Unity, including gameplay systems, UI, physics, scripting, and 2D/3D interaction work.
- Built AR/VR prototypes and interactive experiences, including projects focused on real-world placement, spatial interaction, immersion, and mixed reality UX.
- Comfortable taking vague ideas from concept to working software across mobile apps, web tools, internal utilities, games, and experimental interfaces.

L4 Digital — AR Intern

December 2016 – March 2017

Seattle, WA

- Developed augmented reality experiences using Unity and Vuforia.
- Built interactive prototypes exploring mobile AR behavior, 3D placement, and real-time user interaction.

SELECTED PROJECTS

University Capstone — AR Social Sticker App: Built an augmented reality social experience that let users place virtual stickers in real-world locations and view stickers left by others. Used Swift, SwiftUI, Google Cloud Storage, and Firestore.

VR Immersion Project: Built a virtual reality experience exploring immersion through realistic physics, climbing mechanics, and environmental interaction. Used Unity and C#.

Independent Apps and Games: Built multiple iOS applications, Godot games, Unity prototypes, web projects, and scripting tools as personal projects.

EDUCATION

Santa Clara University — B.S. in Computer Science and Engineering, Minor in Mathematics

June 2021

Dean's Merit Scholarship | GPA: 3.46

HONORS

2021 Hack for Humanity — 2nd Place | 2021 Hack for Humanity CTF — 2nd Place | 2019 Google Tech Challenge — Prize Winner
