

THÉO ARROUYE

theo@arrouye.net | (425) 444-2481 | tarrouye.net

SUMMARY

Product-minded software engineer with deep experience building AI-powered features and native Apple applications (iOS, visionOS, macOS). Shipped LLM-driven character chatbots end-to-end, from system prompt design to the retrieval infrastructure and safety/moderation layers that keep conversations grounded and appropriate. Fluent in the modern AI-assisted development lifecycle, using tools like Claude Code, Codex, and Antigravity daily while applying rigorous review, testing, and production judgment to everything that ships. Comfortable moving across product, design, backend, and AR/3D pipelines to turn ambiguous ideas into polished software.

TECHNICAL SKILLS

AI / LLM: LLM prompt engineering & system prompt design, conversational AI / chatbot architecture, retrieval-augmented context pipelines (product & user data grounding), AI-assisted development workflows, Claude Code, Codex, Antigravity, Cursor

Languages: Swift, Python, JavaScript, TypeScript, Objective-C, C, C++, C#, Lua, Bash, HTML/CSS

Platforms & Frameworks: iOS, visionOS, macOS, SwiftUI, UIKit, Xcode, RealityKit, ARKit, Unity, Godot, Vuforia

Infrastructure & Tools: REST APIs, Cloudflare Workers, Ethereum-based blockchains, Firebase, Firestore, Google Cloud Storage, iCloud, Git, media playback pipelines, internal tooling & scripting, design systems

EXPERIENCE

Founding Product Engineer, **Flickplay**

July 2021 - November 2025

Los Angeles, CA / Seattle, WA

- **Designed and fine-tuned system prompts** for LLM-powered character chatbots, iterating on persona, tone, and behavior to hit product and conversational-quality goals.
- **Built the retrieval infrastructure** that gave chatbots grounded, up-to-date context, including store products, application features, and per-user names and content, enabling accurate, personalized conversations at runtime.
- **Implemented safety and moderation layers** around chatbot responses, including input/output filtering and guardrails, to guard against inappropriate, off-brand, or unsafe content at scale.
- **Owned native iOS, visionOS, and macOS clients** for a complex AR/media product spanning playback, mixed reality content creation, location-based flows, creator tools, and 3D content workflows.
- **Used AI coding tools daily** (Claude Code, Codex, and others) across the development lifecycle, including codebase exploration, implementation scaffolding, and refactoring, while maintaining careful review, testing, and production-quality standards.
- **Built a custom design system** and reusable component patterns that improved interface consistency and let the team move faster across new features.
- **Partnered closely with product and design** to define features, resolve ambiguity, and turn early ideas into shippable native implementations, while supporting backend, QA, and 3D pipeline workflows with Python and Bash scripts, macOS utilities, and lightweight web tools.
- **Operated across engineering, product, design, and content-pipeline boundaries** in a startup environment where ownership regularly extended beyond a single codebase.

Independent Software Developer, **Self-Employed**

Remote

- **Built independent iOS applications** using Swift, SwiftUI, UIKit, RESTful APIs, native platform features, and iCloud sync.
- **Created websites, prototypes, and automation tooling** using HTML, CSS, JavaScript, Python, Bash, and related frameworks.
- **Developed games and AR/VR prototypes** in Godot and Unity, including gameplay systems, physics, spatial interaction, and mixed reality UX.
- **Took ambiguous ideas to working software** end-to-end across mobile apps, web tools, internal utilities, games, and experimental interfaces.

AR Intern, **L4 Digital**

December 2016 - March 2017

Seattle, WA

- Developed augmented reality experiences using Unity and Vuforia.
- Built interactive prototypes exploring mobile AR behavior, 3D placement, and real-time user interaction.

SELECTED PROJECTS

- **University Capstone: AR Social Sticker App:** Built an augmented reality social experience letting users place virtual stickers in real-world locations and view stickers left by others. Used Swift, SwiftUI, Google Cloud Storage, and Firestore.
- **VR Immersion Project:** Built a virtual reality experience exploring immersion through realistic physics, climbing mechanics, and environmental interaction. Used Unity and C#.
- **Independent Apps and Games:** Built multiple iOS applications, Godot games, Unity prototypes, web projects, and scripting tools as personal projects.

EDUCATION

Santa Clara University, B.S. in Computer Science and Engineering, Minor in Mathematics

Dean's Merit Scholarship | GPA: 3.46 | June 2021

HONORS

2021 Hack for Humanity, 2nd Place | 2021 Hack for Humanity CTF, 2nd Place | 2019 Google Tech Challenge, Prize Winner
